Profile

Game developer specialized in gameplay programming and online multiplayer. Hands-on experience with Unreal Engine and C++, plus Godot, gained through a vertical slice, game jams and team projects with artists and programmers. Currently pursuing a Master's degree in Game Development (Online Multiplayer) at UQAC.

Education

Master's Degree in Game Development <i>Université du Québec à Chicoutimi (UQAC), Canada</i>	<i>2026–2028 (expected)</i> Online Multiplayer specialization
Bachelor's Degree in Game Development <i>Université du Québec à Chicoutimi (UQAC), Canada</i>	<i>2024–2025</i> International double-degree program
Bachelor of Technology in Computer Science (BUT) <i>IUT Dijon-Auxerre-Nevers, Dijon, France</i>	<i>2022–2025</i> Application Development: Design, Development and Validation
French Baccalaureate <i>Lycée Henri Parriat, Montceau-les-Mines, France</i>	<i>2022</i> Mathematics; Computer Science

Experience

Gameplay Programmer (academic vertical slice) <i>UQAC, Chicoutimi, Canada</i>	<i>Mar–May 2025</i> Unreal Engine / C++
- Developed <i>Ziggy Found Life (But Ran Out of Fuel on His Way Home)</i> in a team of 11 with artists and programmers. - Implemented in C++ a fuel system and metaball-based mechanics. - Appointed team firefighter: responsible for quickly resolving urgent and blocking bugs to keep the build stable.	
Full-Stack Developer Intern <i>UQAC Research Laboratory, Chicoutimi, Canada</i>	<i>Jan–Jun 2025</i> React / TypeScript / Python / Git
Developed a full-stack web application for a research team, integrating data from several human-machine interface (HMI) analysis devices, including an EEG headset (brain activity) and an eye tracker, with a React/TypeScript front end and a Python back end.	

Selected Game Projects

Multiplayer Combat Game	<i>Unreal Engine – Academic project (Networking course)</i>
Multiplayer combat game built for a networking course at UQAC. Implemented client-server synchronization, RPCs, Server Travel, network time synchronization, and latency compensation with Server Rewind, along with client-side prediction, server reconciliation, and bandwidth optimization.	
Mad Space	<i>Unreal Engine – Game Jam</i>
Collaborative first-person adventure game made in 48h. Players explore an abandoned spaceship, collect treasure and manage a madness mechanic in dark environments.	

Technical Skills

Game Engines	Unreal Engine (C++, Blueprints), Godot
Programming	C++, C#, Python, Java
Web	React, TypeScript, JavaScript, HTML, CSS
Tools	Git, Perforce
Game Development	Gameplay programming, multiplayer development, prototyping

Languages & Interests

Languages: French (native), English (professional working proficiency)
Interests: Video games, swimming, climbing
Community: Vice-President of a high-school charity festival supporting Les Restos du Cœur ([year]).
